

# FLUORINE IN YOUR -- DRINKING WATER

Above you see an actual photograph of a man placing fluorine in the water supply of some unsuspecting community. Fluorine is such a deadly poison that it would be fatal to come in contact with it. There is a plan to put it in your drinking water if it is not already there. Are you aware of

THE SUNDAY ENTERPRISE (Beaumont, Texas)

## PURELY PERSONAL

by Dennis McCort

FOLKS, WHAT WILL YOU HAVE IN YOUR DRINKING WATER?

Lot of people talking the MAYOR and CITY COUNCIL to put this and the other thing in our drinking water as a preventive against everything from rickets to fallen arches....

Gentlemen, let's not let the idea get out of hand... OR ELSE...

For the BALD HEAD Gentry

WONDER IF WE COULD TALK OTTO INTO PUTTING SOME LANOLIN IN THE CITY WATER?

Spring Treatment

CITY COUNCIL? LOOK LITTLE NAUSEA HERE IS ALL SALLOW AND PIMPLY AND PUNY. COULD YOU PUT SOME SULPHUR AND CREAM OF TARTAR IN OUR DRINKING WATER?

The day the town got high!

HOLD IT, SHERRY! I SAID, SHERRY! SHERRY!

### WEEKLY SCHEDULE OF WATER FLAVORS

- Monday — LEMON
- Tuesday — CHERRY
- Wednesday — LIME
- Thursday — PEACH
- Friday — CHOCOLATE
- Saturday — RASPBERRY
- Sunday — BANANA

GET YOUR WEEKLY WATER PROGRAM! YOU CAN'T TELL WHAT YOU'RE DRINKING WITHOUT A PROGRAM!

### WATER?

I DON'T CARE WHAT THEY PUT IN THE WATER. I NEVER TOUCH IT MYSELF!

Our old frequent friend MAJOR MOSSEBACK has too concerned

On Sunday, between 2 and 4 p.m. at the BEAUMONT WATER WORKS

# Say "NO" To Poison-Fluorine In Your Drinking Water

THE FOLLOWING FLUORIDATION FACTS ARE PRESENTED FOR YOUR PROTECTION:

1. What is fluoridation?  
Fluoridation is the adding of a deadly, cumulative poison to drinking-water for the scientifically-unproved purpose of helping children's teeth resist cavities. When sodium fluoride is added to municipal water-supplies, this procedure becomes mass-medication of the populace without regard to health, age, sensitivity, or need of the citizens, drinking this doctored water.

2. Is sodium fluoride a cumulative poison?  
Definitely so: Bulletin 130 of the Utah State Agricultural College entitled "Fluorosis" on page 5 states "Fluorine is a cumulative poison and long continued consumption of small quantities causes fluorosis."

Dr. Paul H. Phillips, biochemist at the University of Wisconsin, says, "It is an accumulative poison which accumulates in the skeletal structures, including the teeth, when the body is exposed to small daily intakes of this element. In this respect, it is like lead accumulations in the bone until saturation occurs and then lead poisoning sets in."

Dr. Charles T. Betts, D.D.S., Toledo, states, "Fluorine is a poison which is cumulative in the body, similar to radium, no antidote is known."

Dr. Royal Lee, D.D.S., Milwaukee, states "Inorganic fluoride is a cumulative poison. . . . It accumulates in the body even when taken in very small doses . . . makes bones brittle."

Dr. Robert S. Harris, professor of the biochemistry of nutrition, Mass. Inst. Technology, says, "Fluorine is a toxic element . . . which has been shown to interfere with important processes in the body."

The U. S. Dispensary, 24th Edition, states, "Fluorides are violent poisons to all living tissue because of their precipitation of calcium. They cause fall of blood pressure, respiratory failure, and general paralysis. Continuous ingestion of non-fatal doses causes permanent inhibition of growth."

3. Are not naturally-fluoridated and artificially-fluoridated waters the same?

Absolutely not! The fluorides found in nature are usually organic calcium fluorides which are in combination with other natural elements serving to inhibit and neutralize the toxic effects of fluorine, and which can be assimilated by the body; the artificially fluoridated water is obtained with sodium fluoride which is an inorganic, cumulative poison 85 times more toxic than calcium fluoride, and cannot be assimilated by the body, and which, when added to water, makes hydrofluoric acid, an extremely active and dangerous poison, used chiefly for etching glass.

4. What effect does artificially-fluoridated water have upon cancerous growth?

Dr. Alfred Taylor of Biochemical Institute U. of Texas, one of the country's leading research scientists who appeared before

the Congressional Committee in Washington, D. C., proved conclusively in a series of experiments that cancerous growth was speeded up by the ingestion of fluoridated water and that the life-span of his experimental animals was 10 per cent less than that of the animals drinking non-fluoridated water.

5. What effect does artificially-fluoridated water have upon the digestive processes?

The University of New Mexico Bulletin of August 1, 1938 on the "Menace of Fluorine to Health," states on page 20-21, "Solutions of sodium fluoride with a fluorine content as low as one part in 15,000,000 may inhibit the action of the lipase (pancreatic juice) as much as 50 per cent."

6. What effect does fluorine have upon the dentine of the teeth?

University of New Mexico Bulletin referred to above states on page 19, "Although it is true that the enamel of adult teeth is unaffected by fluorine, the dentine, which receives nutrients from the blood stream continually and whose composition is subject to change, will suffer."

7. What effect does artificially-fluoridated water, in the recommended dosages, have upon the liver?

University of New Mexico Bulletin referred to above, page 20, states, "An inhibitory effect on the action of enzymes, characteristic of asepsis in general, is a property of all inorganic fluorides. Evidence has been established that there is a specific influence of fluorides on certain enzymatic changes association with carbohydrates and fats. The results of a study conducted by Kastle and Loevenhart on the effect of antiseptics on the reactions of pancreatic and liver extracts revealed a harmful effect on most substances studied."

8. What about periodontal (gum) diseases from fluoridated water?

Dr. H. K. Box, periodontist of international repute on the Dental Faculty of the U. of Toronto, made a survey and found an appallingly high incidence of pyorrhea, gingivitis, and other gum diseases in areas where the water was naturally fluoridated. (Artificially-fluoridated water is 85 times more toxic)

9. What effect could artificially-fluoridated water have upon the body's protoplasmic and enzymatic systems?

Dr. Paul H. Phillips of the U. of Wisconsin dept. of biochemistry states, "Fluorine is known to be an enzymatic inhibitor and interferes with metabolism of breakdown of glucose between the 6 carbon and 3 carbon compounds. The metabolism of glucose or its breakdown is our primary source of energy for maintaining life and doing useful work."

10. Does artificially-fluoridated water have an effect on the brain and nerve-cells?

Dr. A. L. Miller, M.D. records in the Congressional Record, March 4, 1952, that a lessened mental reaction is seen in rats and mice who have had fluorides.

11. Why can promoters of fluoridation state that medical science is ignorant of any bad effects from fluoridated water?

Simply, because the experiments have not been going on a long enough time to demonstrate these cumulative effects. The American Journal of Chemistry states that fluorine tends to accumulate within the body so that the symptoms of fluorine-poisoning may take as long as 10 years to appear." However, in Sheboygan, Wisconsin, after 8 years of fluoridation, the little children who were fed this drugged water in their nursing-bottles are beginning to show the first signs of chronic fluorine-poisoning—mottled teeth.

12. Has either the American Dental Association or the American Public Health Service, in their original scientific research in regard to the effects of artificially-fluoridated water upon teeth or the organs of the human body?

There is no record in scientific literature of their having done so. They seem to be merely echoing the opinions of a group of public-health officials from the United States Public Health Service, who, likewise, have done no conclusive research.

13. Who is behind fluoridation and who stands to profit?

Oscar Ewing, attorney for the American Aluminum Co. of America which has sodium fluoride as a waste product, gave the fluoridation movement its big push when he became Federal Security Administrator. He left \$750,000 a year with the Aluminum Co. to take \$17,500 a year as FSA head. In 1951 his agency asked for two million dollars for fluorine propaganda alone. He also had millions of dollars to give out to dental and medical colleges, state departments of health, as money-grants. Of course, these money grants are given only to those dental and medical colleges and state health departments who foster and promote the programs of the U. S. Public Health Service. It fits together like a glove! Thus the price of sodium fluoride jumped from 1 1/2 cents a pound when sold as a rat-poison up to as much as 15 cents a pound when sold for human consumption in drinking-water.

14. What methods are used to promote fluoridation?

All the techniques of propaganda, the "band-wagon method" (that lists all the towns fluoridating, even though some may not be), the "prestige method" (that gives the names of organizations endorsing fluoridating, even though endorsements are empty and meaningless when not backed up by scientific data), the "glittering generality" method (of making statements that sound good, but when analyzed mean nothing and say nothing) the "name-calling" method (that calls all those

who oppose polluted water such names as "crackpots," "fear-mongers," etc.) the "fictitious story" method, (that relates stories intended to make people who oppose poisoned water as being simple and ignorant)—all these propaganda techniques and others are used.

15. Are many cities rejecting fluoridation?

Over 300 communities in the U. S. have rejected fluoridation so far, with more being added all the time. Cities such as Seattle, Cincinnati, Tallahassee, St. Louis, New York, Detroit, New Orleans, and Los Angeles, to name only a few, have all rejected fluoridation after studying the pros and cons.

16. Why are so many doctors and dentists favoring fluorine?

It seems to be a matter of association-control. Medical and dental colleges, as well as state health departments, receive large grants of money from the U. S. Public Health Service, which is promoting fluoridation. These money-grants are given on the condition that the programs of the USPHS are fostered. Furthermore, it is considered unethical for an individual doctor or dentist to publicly oppose a program which his association has endorsed.

17. Has anything beneficial been proved to be due to fluoridation?

Nothing in scientific literature can be found which shows fluorine, the "wild cat" or "villain" of the chemical world, to be a beneficial agent to human biology. Even the delay in dental cavities which is attributed to the ingestion of fluorine has been said by Dr. Paul Manning, D.M.D. to be a "pathological or diseased effect" of fluorine.

18. Can the people who want fluorides obtain them without having to let the city water-supply be fluoridated?

Yes, there is a tablet, now available at drug-stores, which when dropped in a quart of water or milk will give the exact proposed ratio of 1 ppm.

19. What about the subversive aspects of fluoridation?

There is a school of thought now developing considerable following that fluoridation is Communist-inspired. Former Communist have stated that fluoridation is known to Communists as a method of Red warfare. Considering the recently-exposed infiltration of the many departments of our Federal government by Communists, it is not unreasonable to suppose that fluoridation-program could be subversive, since the U. S. Public Health Service has mothered the fluoridation program in the U. S.

20. Have there been any completed studies, either of the effects of fluorine on the teeth, or on any other parts of the body?

No. Even the studies on teeth have several years yet to run. There are no studies being made at the present time by the USPHS on the effects on other organs of the body.
